

## COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

### IT 004 – Web Systems and Technologies PRELIM

Name: BUENAVENTURA, Aristotle C.	Date: 11/22/2021
Program/Section: IT12S1	Instructor: Ms. Roxanne A. Pagaduan
Assessment Task: Prelim Reflection	

#### Instructions:

- Compose a reflection in paragraph form.
- Your reflection paper should contain the following: NEW Learning; What are the things that you have learned;
- Your realization; How does your new learning contribute to achieve your goal; how does it helped you improve yourself; what you have improved;
- There should be a minimum of 300 and a maximum of 500 words.
- Using the template provided, save your work as LASTNAME\_PRELIMREFLECTION.DOCX or .PDF format.
- Once you're done with the assignment, kindly upload the file.
- This assessment task will be graded using the rubric for reflection paper.

First and foremost, I dropped this course last year after realizing that it was too complex for my current expertise. I suppose my decision was correct at the time because I was a first-year student who had taken an advanced course but afterward recognized I wasn't equipped for it. To be adequately prepared for this course, I have put in a lot of training and studying. Although I had advanced in this subject, our professor, Prof. Roxanne, taught me a lot. I've been using the computer without knowing where the web came from. According to the lecture, the internet's original goal was primarily educational. However, the majority of people now use the internet for their daily activities all over the world. I suppose we can no longer live without it. Businesses include this technology into their systems since they will not attract customers because customers nowadays use technology. Not only that, but they also use the web for faster transactions with their clients or business partners.

I was delighted there was a refresher in HTML and CSS because it's been a year since I've used those terms. However, according to our professor, we are still in the early stages because we only know HTML and CSS. To create

a dynamic web, I'll need to learn JavaScript for the site's functionality, PHP for the webserver, and MySQL for data retrieval from the database.

I need some explanation; I'm still not sure what the difference between the Span and Div tags is. I'm hoping to hear back from our professor.

I only knew about the structure and design of a webpage; however, after our professor taught us about JavaScript, we were able to add some functionality to our website. Thanks to our lecturer for providing us with sufficient exercises to put what she has taught us into practice.
